

tc_module_registers

```
graph BT; encoder_config_t[encoder_config_t] -.->|tc_p| tc_module_registers[tc_module_registers];
```

The diagram illustrates a pointer relationship between two data structures. At the top is a white rectangular box labeled 'tc_module_registers'. At the bottom is a gray rectangular box labeled 'encoder_config_t'. A dashed purple arrow points from the top of the 'encoder_config_t' box to the bottom of the 'tc_module_registers' box. The label 'tc_p' is positioned to the right of the arrow, indicating the variable used for the pointer.
